

AppE - Financial Management System

Business Functionality

- Automates financial reporting and reconciliation for retail banking operations.
- Tracks revenue, expenses, and profitability metrics.
- Provides dashboards for CFO and Finance teams.

Technical Functionality

- Java Spring Boot microservices architecture.
- Oracle DB for ledger and transaction storage.
- Integration with SAP for accounting entries.
- Deployed on Azure Kubernetes Service.

Production Issues & Resolutions

Issue: Month-end reports taking too long to generate.

Resolution: Optimized Oracle queries and implemented report caching.

Issue: Data mismatch between SAP and financial reports.

Resolution: Enhanced reconciliation process and automated data validation.
